Your Investment Portfolio - Key Features Illustration

Introduction

The Financial Conduct Authority (FCA) is a financial services regulator. It requires us, Aviva, to give you this important information to help you to decide whether our Investment Portfolio is right for you. You should read this document carefully so that you understand what you're buying, and then keep it safe for future reference.

The projected amounts shown within this Illustration are indicative and aren't guaranteed.

This illustration shows:

- The current value of your Investment Portfolio
- Payments and transfers in to your Investment Portfolio
- Investment selection for your Investment Portfolio
- Fees and charges which are applicable to your Investment Portfolio
- What your Investment Portfolio might be worth

Please read this document along with the 'Key features of the Investment Portfolio' and any other information you receive about your Investment Portfolio, so that you understand important information about benefits, inflation, risks, tax and your rights and commitments.

Staying informed

It's important to keep track of your Investment Portfolio. To help you do this we'll send you a statement every three months which will advise you of your Investment Portfolio value. You can also view the value of your investment at any time via MyAviva.

If you're unsure about anything in this illustration, please speak to your adviser.

Payments to your Investment Portfolio

Single Payments

We've assumed that you'll pay money into your Investment Portfolio on 16 December 2025.

Payment source	Amount
You pay	£57,120.00
Yearly total	£57,120.00

Where will your payments be invested?

The total amount invested in each asset is shown below.

Investment	Single contribution
Assets	
CT Universal MAP Cautious C Acc	100.00%
Total investment	100.00%

The charges for your Investment Portfolio

The charges are described below. They comprise of:

- Our charges for administering your Investment Portfolio
The way these charges are paid is explained in your Key Features document
- Investment related charges
- Adviser charges

Product charges

The Aviva charge

We'll deduct a charge from your Investment Portfolio for the cost of administering your product. The amount will depend on how much is in your Investment Portfolio each month. When the charge is taken it's calculated based on the total value of your investments through this platform service, including the balance in the cash account.

For any investment above £0 - Above	0.21%
-------------------------------------	-------

Unless otherwise indicated, all charges are taken from the cash account. If there are insufficient monies in the cash account to pay charges, we'll automatically dis-invest the required number of units to pay charges. We won't do this if you have certain investments; please see the Key features for more information.

Investment charges

Based on your current choice, the charges are:

Investment	OCF/TER charge %
CT Universal MAP Cautious C Acc	0.29%
Weighted Average charge	0.29%

Fund manager Initial charge

This is a charge imposed by the fund manager on any purchase of units by an investor. It's calculated as a percentage of the gross amount invested, and deducted prior to investment. Some funds may have different prices for buying and selling units. In these cases the initial charge is included within the price at which the units are bought.

OCF/TER % charge

In addition to the fund manager initial charge, fund managers will also take charges that depend on the investments chosen. These charges may be shown as the ongoing charge figure (OCF), total expense ratio (TER), or for insured funds, simply the annual fund charge. These cover the charge made by the fund manager for managing the investment as well as expenses incurred by the fund. Please note these charges are variable and may change over time.

Adviser charges

You've agreed to pay adviser charges through your Investment Portfolio

Initial adviser charge	£4,794.37 from the single payments into your Investment Portfolio.
Ongoing adviser charge	1.00% of the value of your Investment Portfolio each year. Based on your new payments and today's value of your Investment Portfolio, this is estimated as £47.60 taken each month. The amount you pay will vary over time as the value of your Investment Portfolio changes.

Interest on your cash account

Cash within your Investment Portfolio will be held in one or more interest bearing client money trust account(s) with external account providers of our choice. This cash will be held in accordance with the Financial Conduct Authority (FCA) client money rules, as amended from time to time.

The interest rate payable is 3.30% annual equivalent rate (AER) and is variable. AER illustrates what the interest rate would be if interest was paid and compounded once each year. Interest will be credited to your cash account monthly on or around the 1st of each month. Interest rates can be positive, zero or negative.

To check the current interest rate on the cash account at any time, go to aviva.co.uk/bank-interest-rates/

What your Investment Portfolio might be worth

This section shows how your fund may grow assuming three different yearly growth rates (low, middle and high). Firms must use lower, intermediate and high rates that reflect the investment potential of the product and don't exceed rates set by the Financial Conduct Authority (FCA). The actual rates of return could be higher or lower than these. There is no fixed date when your Investment Portfolio must end. This illustration shows what you might get back in the next ten years.

	Lower 1.5%	Medium 4.5%	Higher 7.5%
After 1 year	£52,300	£53,800	£55,400
After 2 years	£52,300	£55,400	£58,600
After 3 years	£52,300	£57,000	£62,100
After 4 years	£52,300	£58,700	£65,800
After 5 years	£52,200	£60,400	£69,600
After 6 years	£52,200	£62,200	£73,800
After 7 years	£52,200	£64,100	£78,100
After 8 years	£52,200	£65,900	£82,700
After 9 years	£52,200	£67,900	£87,600
After 10 years	£52,200	£69,900	£92,800

Important notes and assumptions:

- The growth rates aren't guaranteed. They aren't minimum or maximum amounts. What you get back will depend on how the investments grow, and the level of charges. The value of investments can go down as well as up and you may not get back the amount invested.
- Both product and adviser charges have been assumed to remain the same as they are today.
- Charges may vary in the future.
- You keep the same investments.
- Price inflation is the general increase in the price of goods and services over time. This can affect the future buying power of your money and therefore price inflation will reduce what you could buy in the future. The projected values shown do not take into account the impact of price inflation.

How the charges reduce the value of your Investment Portfolio

Below we illustrate the effect of the charges on your Investment Portfolio, We show how your fund(s) may grow in three ways:

- Without charges
- After product and investment charges
- After all of the charges

The numbers below are calculated on the middle basis 4.5% each year after taking into account inflation at an assumed rate of 0.00%.

At end of year	The payments into your plan	Withdrawals	Before charges are taken	If only plan and investment charges are taken	After all charges are taken from this plan
1	£57,100.00	£0.00	£59,600	£59,400	£53,800
2	£57,100.00	£0.00	£62,300	£61,800	£55,400
3	£57,100.00	£0.00	£65,100	£64,300	£57,000
4	£57,100.00	£0.00	£68,100	£66,900	£58,700
5	£57,100.00	£0.00	£71,100	£69,600	£60,400
6	£57,100.00	£0.00	£74,300	£72,400	£62,200
7	£57,100.00	£0.00	£77,700	£75,300	£64,100
8	£57,100.00	£0.00	£81,200	£78,400	£65,900
9	£57,100.00	£0.00	£84,800	£81,600	£67,900
10	£57,100.00	£0.00	£88,700	£84,900	£69,900

The product and Investment charges could reduce the value of this Investment Portfolio from £88,700 to £84,900 - this is the same as reducing the investment growth after inflation from 4.5% to 4.0%. This is a reduction in the growth rate of 0.5%.

All charges could reduce the value of this Investment Portfolio from £88,700 to £69,900 - this is the same as reducing the investment growth after inflation from 4.5% to 2.0%. This is a reduction in the growth rate of 2.5%.

The figures show the effect of charges so you can compare with similar products.

The effect of charges can vary, depending on payment type and investments chosen. We've combined the separate figures in a proportionate way to show the overall effect of total deductions.
