Your Key Features Illustration - a summary

This is a summary of your illustration. It shows how much your future pension pot could be worth, together with the charges. For more details see the full illustration on the pages that follow.

Summary Information	
Withdrawals from your Drawdown account	
Total amount withdrawn annually (please note some of this payment may be subject to income tax)	£16,760.04 (£1,396.67 monthly). These are assumed to be starting on 06 August 2026. ** You have multiple income streams please see the main body of the document for each individual income breakdown
What your fund value might be worth Based on the information shown above and assuming your investments grow at the rates specified later in the document	
	Accumulation
• In 5 years time, your plan might be worth	£44,700.00
• In 10 years time, your plan might be worth	£0.00
• Your fund will run out when you are	71
Each year charges will reduce the assumed annual growth rate of your plan, after inflation, by:	1.50%
So if, over the term of your plan, your fund grows annually by 2.80% above inflation, this yield (investment return) would reduce to 1.30% p.a. after charges.	
Comparison information	
For comparison purposes the first year charge figure is:	£1,600.00

*The account has regular crystallisation

Your Pension Choice Illustration

Introduction

The Financial Conduct Authority is a financial services regulator. It requires, Aviva to give you this important information to help you to decide whether our Pension is right for you. You should read this document carefully so that you understand what you are buying, and then keep it safe for future reference.

This is an illustration of what your pension might be worth when you retire. The projected amounts shown within this Illustration are indicative and are not guaranteed.

Please read this document along with '**The Pension Key Features Document**' and any other information you receive about your Pension, so that you understand important information about benefits, price inflation, risks, tax and your rights and commitments.

Your tax liability depends on your personal circumstances and may change in the future.

If you have any questions, please speak with your financial adviser in the first instance. Or you can contact us on **0800 068 2170** between Monday to Friday, 8.30am to 5.30pm or email us at **advisedplatform@aviva.com**.

This illustration shows:

- The current value of your Pension.
- New and existing payments and transfers into your Pension.
- Value of funds and transfers being moved into Income Drawdown Phased Drawdown.
- Investment selection for your Pension.
- Fees and charges which are applicable to your Pension.

-
- What your Pension might be worth.

Staying informed

It is important to keep track of your pension fund. To help you do this we will send you a statement every three months which will advise you of your pension fund value and what your benefits might be worth. You can also view the value of your investment at any time via MyAviva.

If you are unsure about anything in this illustration, please speak to your financial adviser.

Your details

Your details		How to contact your adviser
Name:	Mrs A Stead	Tom Randall
Date of birth:	16 October 1962	
Intended retirement date*:	16 October 2037	
Intended annuity purchase age**:	75	tom.randall@tfas.com

* You can change your intended retirement date

**You do not have to buy an annuity at that time. You could instead choose to do so earlier, later or to stay in drawdown.

Payments into your Pension

Transfers

Source of transfer	Value*
Uncrystallised transfers	
Uncrystallised Transfer	£122,886.00

*Exact amount will be known when transfer is complete

Your regular crystallisation

You have decided to set-up a new regular income for your Pension drawdown pension.

Detail	
Income required	£349.17
Additional Taxable Income	£1,047.50
Frequency	Monthly
Payment date	06 August 2026

Where will your payments be invested?

The total amount invested in each asset is shown below.

Investment	Uncrystallised transfers in
Assets	
HSBC Global Strategy Conservative Portfolio C Acc	50.00%
Vanguard Lifestrategy 40% Equity - Acc	50.00%
Total investment	100.00%

The charges for your Pension

The charges are described below. They comprise:

- Our charges for administering your Pension.
The way these charges are paid is explained in your Key Features document
- Investment related charges.
- Adviser charges.

Product charges

The Aviva charge

We will deduct a charge from your pension fund for the cost of administering your portfolio. The amount will depend on how much is in your pension fund each month. The Aviva charge is calculated based on the total value of your investments through this platform service. Details of the charge are shown below.

For any investment above £0.00 - Above	0.21%
--	-------

Unless otherwise indicated, all charges are taken from the cash account. If there are insufficient monies in the cash account to pay charges then we will automatically dis-invest the required number of units to pay charges. We will not do this if you have certain investments; please see the Key Features for more information.

Investment related charges

The charge depends upon the investment you choose and they may vary in the future. Based on your current choice, the charges are:

Investment	OCF/TER charge %
HSBC Global Strategy Conservative Portfolio C Acc GB00BYVXBK29	0.20%
Vanguard Lifestrategy 40% Equity - Acc GB00B3ZHN960	0.20%
Weighted Average charge	0.20%

Putting these rates into context, for every £1,000 a charge of 0.5% equates to £5.

Initial Fund Charge - means a charge imposed by the fund manager on any purchase of shares by an investor. It is calculated as a percentage of the gross amount invested, and deducted prior to investment. Some funds may have different prices for buying and selling units. In these cases the initial charge is included within the price at which you buy units. If the fund(s) above are being re-registered to Aviva from another provider, the initial fund charge will not be taken as it will have been paid previously.

OCF/TER % charge

In addition to the initial fund charge, fund managers will also take charges that depend on the investments chosen. These charges may be shown as the ongoing charge figure (OCF), total expense ratio (TER), or for insured funds, simply the annual fund charge. These cover the charge made by the fund manager for managing the investment as well as expenses incurred by the fund. Please note these charges are variable and may change over time.

Weighted average % charge

This is the average charge once the percentages of the investment choices are taken into account.

For further information about investment charges please talk to your financial adviser.

Interest on your Pension cash account

Cash within your Pension will be held in one or more interest bearing client money trust account(s) with external account providers of our choice. This cash will be held in accordance with the FCA client money rules, as amended from time to time.

The interest rate payable is 3.05% annual equivalent rate (AER) and is variable. AER illustrates what the interest rate would be if it was compounded once each year. Interest rates can be positive, zero or negative. Interest will be credited to or deducted from (if the rate is negative) your cash account monthly on or around the 1st of each month.

We may keep some of the interest earned on cash and pass the remaining amount on to you. You can find out what margin we keep on our cash interest factsheet at [aviva.co.uk/bank-interest-rates/](https://www.aviva.co.uk/bank-interest-rates/).

Adviser charges

You have agreed to pay adviser charges through your Pension.

Initial Adviser Charge	3.00% which equals £3,686.58 from the cash transfer payments into your pension.
Ongoing Adviser Charge	1.00% of the value of your Aviva pension fund each year. Based on your new payments and today's value of your Aviva pension fund, this is estimated as £99.33 taken each month. The amount you pay will vary over time as the value of your Aviva pension fund changes.
Ongoing Adviser Charge (drawdown)	1.00% of the value of your Aviva drawdown pension fund each year. Based on your new payments and today's value of your Aviva drawdown pension fund, this is estimated as £0.00 taken each month. The amount you pay will vary over time as the value of your Aviva drawdown pension fund changes.

What your pension fund might be worth

At any time you can choose to stop income drawdown and use the total of your accumulation and income drawdown funds to purchase a retirement income via another product.

This section shows benefits you might receive assuming three different yearly growth rates (low, middle and high). The actual rates of return could be higher or lower than these.

The figures below compare to an annuity you could buy today of £8,122.60 per year, but before reviewing these figures, please read "Important notes about the projections".

Underneath we show the other assumptions we've used.

This is only to give you an idea because we can't predict future investment growth.

Important notes about the projections

- The growth rates are not guaranteed. They are not minimum or maximum amounts. What you get back will depend on what you make on your actual investments. The value of your pension fund can go up or down and may be worth less than has been paid in.
- While only a selection is shown the projections have been carried out for an income assumed payable throughout the term of the portfolio.
- Product and Adviser charges have been assumed to remain the same as they are today.
- However, charges may vary in the future.
- Price inflation is the general increase in the price of goods and services over time, it's important to note that price inflation reduces the worth of all savings and investments. These projections illustrate what you might get back in "today's money" which means it takes the effect of price inflation at 2.00% into account.
- The amount of annuity you may eventually buy may be adversely affected if the investment returns are low when you purchase your annuity. Annuity rates may be more or less favourable if you choose to buy an annuity in the future.
- If part of your investment is used to buy an annuity or the investment is reduced because of a pension sharing order (in the event of divorce or dissolution of a civil partnership) the income you are currently taking will reduce your fund value quicker than it would have done previously.
- This pension provides a regular income. Depending on your tax position at the time of payment your regular income payments may fluctuate.

What your accumulation pension fund might be worth and the income it could provide

What the benefits from your uncrystallised fund might be worth on 16 October 2037 after the changes shown in the Payments section have taken place:

	Example yearly investment growth rate		
	Lower 1.8%	Medium 4.9%	Higher 7.9%
Example growth rates reduced by price inflation at 2%	-0.2%*	2.8%	5.8%
Your pension fund could be worth	£0	£0	£0
You can normally take up to 25% as a tax free lump sum. This could be:	£0	£0	£0
With the rest you could buy an annuity of:	£0	£0	£0
Or, if you don't take a lump sum your annuity could be:	£0	£0	£0

* A negative growth rate after price inflation will reduce the buying power of your Pension over time.

It is important to understand that all the above figures are to give you an idea of what you could receive. We can't predict how your fund will grow and what it will cost to buy an annuity when you retire.

Our other assumptions

- You keep the same investments.
- The charges stay the same.
- The interest rate and any amount (margin) we keep from your cash interest will stay the same.
- When you buy an annuity you decide to get:
- The annuity purchase figures assume that your pension will be paid for a guaranteed 5 year period.
- The income is paid in advance. All income figures are shown before deduction of tax.

How the charges reduce the value of your pension fund

All pension providers have to provide these figures to help you compare their charges.

For the purposes of the last three columns, we have assumed investments will grow at 2.8% each year. This is based on an example growth rate of 4.9% to which we have then applied price inflation at 2%. We have also applied inflation to your total payments. These rates are not guaranteed and growth could be more or less than this.

At end of year	Total new payments	Before charges	After taking product and investment charges	After taking all charges
1	£119,000.00	£105,000.00	£105,000.00	£104,000.00
3	£119,000.00	£78,400.00	£77,200.00	£74,100.00
5	£119,000.00	£51,000.00	£49,100.00	£44,700.00
At age 75	£119,000.00	£7,900.00	£5,600.00	£0.00

The last line of the table shows that over the full term of the pension:

There may be charges based on your asset selection which are not taken into account in the final column of this table. Please refer to your key features document if you require details of any additional charges.

- Product and Investment charges could reduce this pension fund from £7,900.00 to £5,600.00 - this is the same as reducing the investment growth after inflation from 2.8% to 2.4%. This is a reduction in the growth rate of 0.4%.
- All charges could reduce this pension fund from £7,900.00 to £0.00 - this is the same as reducing the investment growth after inflation from 2.8% to 1.3%. This is a reduction in the growth rate of 1.5%.

The figures show the effect of charges so you can compare with similar products.

The effect of charges can vary, dependent on payment type and investments chosen. We have combined the separate figures in a proportionate way to show the overall effect of total deductions.

We may keep some of the interest earned on cash and pass the remaining amount on to you. You can find out what margin we keep on our cash interest factsheet at [aviva.co.uk/bank-interest-rates/](https://www.aviva.co.uk/bank-interest-rates/).

If you are unsure about anything in this illustration please speak to your financial adviser.

What your Flexi-access drawdown pension fund might be worth and the income it could provide

This section shows benefits you might receive assuming three different yearly growth rates (low, middle and high). The actual rates of return could be higher or lower than these.

As required by regulation, the projected figures in this document take into account the charges applicable over the projection period, and are adjusted for inflation at 2.00% each year. Any income withdrawals and any payment amounts are shown without inflation adjustment in bold text and the same amounts, adjusted for inflation, in normal text.

This is only to give you an idea because we can't predict future investment growth or price inflation.

Full crystallisation of previously uncrystallised pension fund

The table below shows what benefits might be deducted from this drawdown pension fund after 10 years, at the age at which you have chosen to buy an annuity and at age 99.

Example growth rates reduced by price inflation at 2%	Example yearly investment growth rate		
	Lower -0.2%	Medium 2.8%	Higher 5.8%
After 10 years			
After 10 years your pension fund could be worth:	£0	£0	£0
Total income over the next 10 years:	£84,300	£94,000	£107,000
At age 75			
At your intended annuity purchase age your pension fund could be worth:	£0	£0	£0
Total income up to your intended annuity purchase age:	£84,300	£94,000	£107,000
At age 99			
At age 99 your pension fund could be worth:	£0	£0	£0
Total income up to age 99:	£84,300	£94,000	£107,000

Your requested income

You have asked that we assume the following for this illustration:

Income from your drawdown pension fund	
Your selected income level	£12,570.00 each year
Your income will be paid monthly starting on	06/08/2026

This section shows benefits you might receive assuming three different yearly growth rates (low, middle and high). The actual rates of return could be higher or lower than these.

The Financial Conduct Authority requires us to show these projections up to age 99 or for as long as your fund exists at the higher rate of return. This is so you have the necessary information available if you wish to consider an alternative date to the retirement age you have selected. Where your chosen

retirement age is younger than 99, we have highlighted the projected rate for your chosen retirement age within these tables.

Before reviewing these figures, please read 'Important notes about the projections'.

Example growth rates reduced by price inflation at 2%	Example yearly investment growth rate					
	Lower -0.2%		Medium 2.8%		Higher 5.8%

What your regular income might be worth in the future

At any time you can choose to stop income drawdown and use the total of your accumulation and income drawdown funds to purchase a retirement income via another product.

The figures below compare to an annuity you could buy today of £8,122.60 per year, but before reviewing these figures, please read "Important notes about the projections".

Underneath we show the other assumptions we've used.

This is only to give you an idea because we can't predict future investment growth.

Example growth rates reduced by price inflation at 2%	Example yearly investment growth rate		
	Lower -0.2%	Medium 2.8%	Higher 5.8%
After 10 years			
Total income over the next 10 years:	£84,300	£94,000	£107,000
Your annual annuity income could be worth	£0	£0	£0

It is important to understand that all the above figures are to give you an idea of what you could receive. We can't predict how your fund will grow and what it will cost to buy an annuity when you retire.

Our other assumptions

- You continue to save the amounts shown on page 2.
- The interest rate and any amount (margin) we keep from your cash interest will stay the same.
- When you buy an annuity you decide to get:
- Monthly in advance income, guaranteed to be paid for at least 5 years, or until you die if later.
- The annuity is on a level basis.

How the charges reduce the value of your pension fund

All pension providers have to provide these figures to help you compare their charges.

Below we illustrate the effect of the charges from your pension. We show how your pension fund may grow net of all charges.

The numbers below are calculated on the Middle basis 4.9%.

At end of year	Total funds moved into income drawdown	Total income to date	Before charges	After taking product and investment charges	After taking all charges
1	£12,400.00	£12,400.00	£0.12	£0.12	£0.12
	£12,500.00	£12,500.00			
2	£24,600.00	£24,600.00	£0.24	£0.24	£0.24
	£25,100.00	£25,100.00			
3	£36,600.00	£36,600.00	£0.37	£0.36	£0.36
	£37,700.00	£37,700.00			
4	£48,300.00	£48,300.00	£0.49	£0.49	£0.48
	£50,200.00	£50,200.00			
5	£59,800.00	£59,800.00	£0.61	£0.61	£0.59
	£62,800.00	£62,800.00			
6	£71,100.00	£71,100.00	£0.74	£0.73	£0.71
	£75,400.00	£75,400.00			
7	£82,100.00	£82,100.00	£0.87	£0.86	£0.83
	£87,900.00	£87,900.00			
8	£93,000.00	£93,000.00	£1.00	£0.98	£0.94
	£100,000.00	£100,000.00			
At age 99	£94,000.00	£94,000.00	£0.06	£0.04	£0.00
	£101,000.00	£101,000.00			

- Product and Investment charges could reduce this pension fund from £0.06 to £0.04 - this is the same as reducing the investment growth from 2.8% to 2.4%. This is a reduction in the growth rate of 0.4%
- All charges could reduce this pension fund from £0.06 to £0.00 - this is the same as reducing the investment growth after inflation from 2.8% to 1.4%. This is a reduction in the growth rate of 1.4%.

We may keep some of the interest earned on cash and pass the remaining amount on to you. You can find out what margin we keep on our cash interest factsheet at [aviva.co.uk/bank-interest-rates/](https://www.aviva.co.uk/bank-interest-rates/).

The figures show the effect of charges so you can compare with similar products.

The effect of charges can vary, dependent on payment type and funds chosen. We have combined the separate figures in a proportionate way to show the overall effect of the total deductions.

Critical yield information for discussion with your adviser

Critical yields can be used to help understand the potential growth rates needed to achieve the desired income amount from your drawdown pension fund.

Critical Yield A

This is used to show the amount of income you can get if you buy an annuity today from your Flexi access drawdown pension fund and how much that drawdown pension fund needs to grow each year to provide that amount in the future.

For your Flexi access drawdown pension fund		Age an annuity is purchased		
		65	70	75
Yearly income if you buy an annuity today	£8,122.60			
Yearly investment return required		6.4%	6.6%	6.8%

If you buy an annuity at age 75 this Flexi access drawdown pension fund needs to grow at 6.8% each year. This is based on an annuity interest rate of 5%.

Critical Yield B

This is used to show the yearly investment returns needed to get your chosen yearly income, when you buy an annuity at your chosen annuity purchase age.

The table below show both the investment returns and the annuity interest rate needed in the future to provide your chosen yearly income amount.

For your Flexi access drawdown pension fund		Age an annuity is purchased		
		65	70	75
Yearly investment return required for an income of	£12,570	18.7%	17.1%	16.7%
Annuity interest rate		13.9%	12.9%	12.6%

If you buy an annuity at age 75 this Flexi access drawdown pension fund needs to grow by 16.7% each year. This is based on an annuity interest rate of 12.6%.
