Name [REDACTED]
Date of birth 7 Jun 1956
Plan number D2301334000

1 October 2025

Your personal illustration to help you plan for retirement

£ What you could get back

Your pension pot
could be:

£3,250

This could give an annual
income for life before tax of:

£300

These figures are based on the assumed payments and investments shown in this document. We've used an investment return of 2.0% per year after inflation, and a retirement date of 6 June 2031.

£ The value of your plan

Your plan value at
1 October 2025 is:

£3,002.02

Any payments or instructions
given to us 3 working days before
this date may not be included in
the plan value shown.

We've assumed no further payments will be paid.

Financial advice

We recommend that you speak to a
financial adviser about the options that
are available to you.

Your investments

The table below shows the investments you have selected. The assumed returns and charges used in this illustration are based on your investments.

Investment	Current plan value
SL At Retirement Universal (PP 10 Year) Pension Fd	100.00%

How your investment returns could affect what you get back

See the **Important information** section for the assumptions used to calculate these figures.

For more information on the funds and investments you've chosen go to standardlife.co.uk/funds

Charges and discounts on your plan

The assumed average charges each year used in this illustration are:

Charges	
Fund charges	1.0%
Discounts	-0.5%

Total charge
0.5%

The discounts shown reduce the total charges on your plan.

The charges shown are averages calculated over the full duration of the illustration.

The charges are determined by the investments you have selected and the terms of your plan. You can find more detail about the charges at standardlife.co.uk

How charges affect the value of your plan

At end of year	Payments into your plan	Value before charges are taken	Value after all charges are taken
1	£2,943	£3,060	£3,040
3	£2,828	£3,180	£3,130
5	£2,719	£3,300	£3,220
6 Jun 2031	£2,683	£3,350	£3,250

This shows how charges could affect the value of your plan over time, assuming your plan grows at 2.0% each year after allowing for inflation.

The 'Payments into your plan' column includes, current value and any payments to the plan.

The table above shows that all charges would reduce your investment return from 2.0% to 1.5% each year. This is an effective reduction in growth of 0.5%.

You can use reduction in growth figures to compare charges between similar products.

Important information

It's essential for you to note that this illustration is based on a number of assumptions so your benefits at retirement could be very different. Tax rates or inflation rates could change and charges may vary. The value of investments can go down as well as up and you could get back less than you paid in.

Inflation will make prices increase. When you retire things will be more expensive than they are today and you need to consider this when planning for your retirement. This illustration takes account of inflation.

You will be sent a statement each year so you can keep track of your benefits.
This illustration should be read along with the Group Flexible Retirement Plan Key Features Document.

Pension pot at retirement assumptions

We've based the assumed returns on the investments you have chosen, allowing for charges, and we've reduced them by 2.0% to allow for the effect of inflation. The illustrated values allow for the charges that apply.

We've assumed no more payments will be made.

Please read 'Information about tax relief, limits and your pension'. You can find this at [standardlife.co.uk/taxandpensions](https://www.standardlife.co.uk/taxandpensions), or phone us for a paper copy.

Annual income for life (an annuity) assumptions

- You start taking a monthly pension the day you reach the retirement date stated on page 1
- If you die within 5 years of taking your taxable annual income it will continue to be paid until the end of that 5 year period
- Your pension payments will not increase
- Your pension will not be paid to a dependant after you die
- You can normally take up to 25% of your plan value as a tax free lump sum. If you did this your annual income would be reduced by 25%. The illustrated values given in this quote assume you do not take a 25% tax free lump sum

Your plan gives you options when you retire. We've illustrated what the benefits might be if you choose to buy a taxable annual income using your full fund value however, other options are available.
