Analysis Report

Introduction

The purpose of this analysis is to provide information, which will assist you to make an informed decision, on whether or not, to switch all or some of your pension funds to an alternative Pension arrangement.

This analysis does not, on its own, show whether or not switching your funds is advisable, as that also depends on many other factors, such as your “attitude to risk”, and your personal circumstances and objectives. It does, however, give an indication of the likelihood of being able to match or exceed the fund provided by the Existing plans with a switch to an alternative plan based on a charges comparison.

Projections have been provided to indicate the possible fund value at retirement based on assumed growth rates, this is compared with the projected fund if invested in:

- **Aviva Pension Portfolio (Choice)**

The analysis will show the results of this comparison as:

1. The estimated fund value at retirement from the providers.
2. The estimated annual investment return needed, from the proposed plan, to provide a fund at retirement age of 87 equal to that of your existing arrangements.
3. The estimated percentage difference between the proposed alternative pension policy and your existing arrangements at retirement.
4. The immediate effect on your fund as a result of the switch.
5. The fund values that may be paid as a death benefit immediately following switch.

This analysis needs to be read in conjunction with the illustrations provided by the recommended provider and any recommendations made by your adviser.

The analysis has been based on your personal information and the details supplied by your existing plan providers.

Personal Pension Policies

These policies operate on the "Money Purchase" basis (also known as "Defined Contribution") & provide a fund of money, at retirement, which is then used to purchase a pension and normally a Pension Commencement Lump Sum (PCLS). The amount of the fund at retirement is dependent upon the level of contributions paid, the investment return on the contributions once invested, and the charges under the policy.

At retirement the fund can be used to provide a pension by purchasing an annuity in the open market (guaranteed income), the amount of pension provided is therefore dependent upon the annuity rates then available in the market or by entering Drawdown. The income from a drawdown contract is not guaranteed and will depend on future investment returns and levels of withdrawals.

True Potential Personal Pension

Type of Pension	Personal Pension
Provider Name	True Potential
Product Name	Personal Pension
Valuation Date	10/02/2026
Term of Pension	Proposed Age 87
Fund Value at valuation date	£46,672.80
Transfer Value at valuation date	£46,672.80

Projections

Growth rates	0%	2.94%	5.88%
Paid Up at age 87	£34,162	£85,961	£210,749

nest Personal Pension

Type of Pension	Personal Pension
Provider Name	nest
Product Name	Personal Pension
Valuation Date	20/02/2026
Term of Pension	Proposed Age 87
Fund Value at valuation date	£21,272.64
Transfer Value at valuation date	£21,272.64

Projections

Growth rates	0%	2.94%	5.88%
Paid Up at age 87	£19,334	£48,651	£119,277

Accumulative Comparison

Projected Fund (Paid Up) at proposed age 87

	Assumed Growth Rates (Average)		
	0%	2.94%	5.88%
Existing Schemes*	£53,497	£134,612	£330,027
Aviva Pension Portfolio (Choice)	£60,100	£151,000	£370,000
Rate of Return Required from Aviva	-0.36% (-0.36%)	2.56% (-0.38%)	5.49% (-0.39%)
The effect this will have on the fund if moved to Aviva	+12.34%	+12.34%	+12.34%
Reduction in Yield if moved to Aviva	0.4%	0.4%	0.4%

Where the total projected fund value from the receiving scheme is £100,000 or more, that figure will be rounded down to the nearest thousand. Please see the notes page.

The rate of return required, also known as the Critical Yield, is the level of growth required each year for the new scheme to match the existing scheme projection. The number shown in brackets is the difference between the growth assumption used within the case and the rate of return required.

Results have been adjusted for inflation, adjusted growth rates shown are after inflation.

* The projections have been system generated.

True Potential Personal Pension

Projected Fund (Paid Up) at proposed age 87

The figures below take into account your True Potential Personal Pension transfer value of £46,672.80.

	Assumed Growth Rates		
	0%	2.94%	5.88%
Existing Scheme*	£34,162	£85,961	£210,749
Reduction in Yield	1%	1%	1.1%
Aviva Pension Portfolio (Choice)	£41,200	£103,000	£254,000
Rate of Return Required from Aviva	-0.6% (-0.6%)	2.33% (-0.61%)	5.25% (-0.63%)
The effect this will have on the fund if moved to Aviva	+20.85%	+20.85%	+20.85%
Reduction in Yield if moved to Aviva	0.4%	0.4%	0.4%

Where the total projected fund value from the receiving scheme is £100,000 or more, that figure will be rounded down to the nearest thousand. Please see the notes page.

The rate of return required, also known as the Critical Yield, is the level of growth required each year for the new scheme to match the existing scheme projection. The number shown in brackets is the difference between the growth assumption used within the case and the rate of return required.

Results have been adjusted for inflation, adjusted growth rates shown are after inflation.

* The projections have been system generated using 0.4% plan charges monthly, 0.58% Fund AMC.

Fund Value Comparison

On the day of switch, the value of the funds in your existing arrangements and the proposed replacement plan are as follows:

True Potential Personal Pension	£46,672
Aviva - Pension Portfolio (Choice)	£46,672
The day one effect of transfer	£0

Death Benefit Comparison

On the day of switch, the capital value of the death benefits under your existing arrangements and the proposed replacement plan are as follows:

True Potential Personal Pension	£46,672.80
Aviva - Pension Portfolio (Choice)	£46,672.80

nest Personal Pension

Projected Fund (Paid Up) at proposed age 87

The figures below take into account your nest Personal Pension transfer value of £21,272.64.

	Assumed Growth Rates		
	0%	2.94%	5.88%
Existing Scheme*	£19,334	£48,651	£119,277
Reduction in Yield	0.3%	0.3%	0.3%
Aviva Pension Portfolio (Choice)	£18,800	£47,300	£116,000
Rate of Return Required from Aviva	0.09% (+0.09%)	3.03% (+0.09%)	5.97% (+0.09%)
The effect this will have on the fund if moved to Aviva	-2.68%	-2.68%	-2.68%
Reduction in Yield if moved to Aviva	0.4%	0.4%	0.4%

Where the total projected fund value from the receiving scheme is £100,000 or more, that figure will be rounded down to the nearest thousand. Please see the notes page.

The rate of return required, also known as the Critical Yield, is the level of growth required each year for the new scheme to match the existing scheme projection. The number shown in brackets is the difference between the growth assumption used within the case and the rate of return required.

Results have been adjusted for inflation, adjusted growth rates shown are after inflation.

* The projections have been system generated using, 0.3% Fund AMC.

Fund Value Comparison

On the day of switch, the value of the funds in your existing arrangements and the proposed replacement plan are as follows:

nest Personal Pension	£21,272
Aviva - Pension Portfolio (Choice)	£21,272
The day one effect of transfer	£0

Death Benefit Comparison

On the day of switch, the capital value of the death benefits under your existing arrangements and the proposed replacement plan are as follows:

nest Personal Pension	£21,272.64
Aviva - Pension Portfolio (Choice)	£21,272.64

Proposed Pension Plan

The below charges are based on day one of transfer, any changes to the fund value could potentially alter the charges which apply and this will be taken into account.

Standard Charges

Aviva Pension Portfolio (Choice)

Annual Management Charge 0.25% pa

The value of these standard plan charges may vary depending on the size of the fund or investment, and are based on an assumed investment fund and no remuneration. If other funds or level of remuneration are selected the results of the analysis would be different.

Standard charges amended by

Decrease in Annual Management Charge of 0.08%

Investment Objective

The Fund aims to provide growth in line with its risk profile in the long term, which is a period of five years or more. To achieve its objective the Fund will invest a minimum of 70% in collective investment schemes, including exchange traded funds, which aim to track the performance of market indices. Such assets shall, in turn, invest in shares of companies (equities), bonds and property securities that make up the relevant index. The Fund may also invest up to 30% directly in bonds where exposure to an asset class...

Lump Sum At Proposed Retirement Age 87

Set out below is a comparison of the estimated PCLS that may be provided at proposed retirement Age 87.

Existing Schemes	£33,600
Aviva Pension Portfolio (Choice)	£37,800

Assumptions

- 1. The value of the investments in the Aviva Pension Portfolio (Choice) are based on medium level growth rate before charges are deducted.
- 2. As of 6th April 2006 (known as A-Day) every individual will be taxed on the amount by which they exceed their allowance. The allowance in the tax year 2021/22 for most individuals is £1.0731m. The allowance will index annually in line with Consumer Prices Index (CPI) from April 2026. Some individuals may have a higher allowance if they have registered for Protection (This is only relevant if you have a 'Protected Pension Commencement Lump Sum' in respect of the benefits accrued by the scheme before 6th April 2006).

Death Benefit Comparison

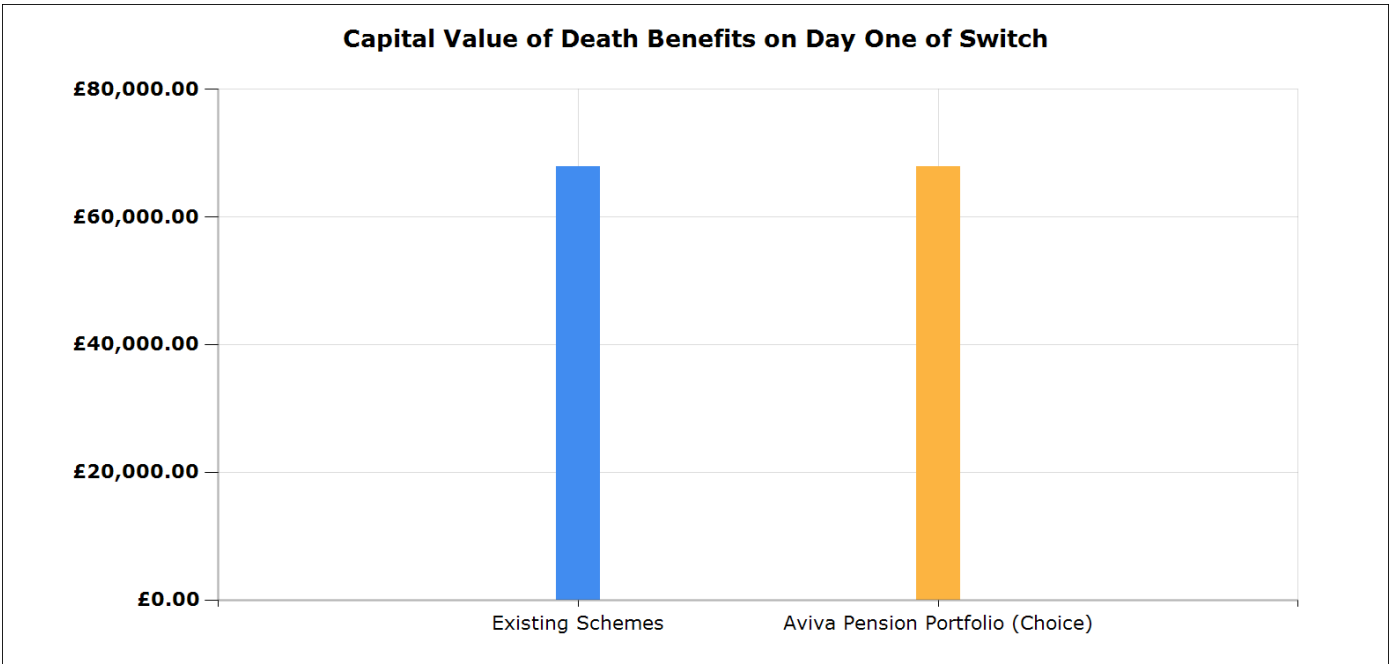

On the day of switch, the capital value of the death benefits under your existing arrangements and the proposed replacement plan are as follows:

True Potential Personal Pension	£46,672
nest Personal Pension	£21,272
Total	£67,945
Aviva Pension Portfolio (Choice)	£67,945

If the death benefit available after switch is lower than that provided by the existing arrangements, consideration should be given to replacing the shortfall.

A lump sum death benefit is available up to 100% of the fund. A tax charge may be levied on any amount above the Lifetime Limit Pension Commencement Lump Sum allowance.

After transfer – the proposed Aviva Pension Portfolio (Choice) will provide 100% of the existing plan's death benefit

Results Summary

Projected Inflation Adjusted Fund Value at proposed retirement Age 87

Provider	Plan	0%	2.94%	5.88%	RIY
Aviva	Pension Portfolio (Choice)	£60,100	£151,000	£370,000	0.4%
Existing Plan		£53,497.38	£134,612.81	£330,027.33	

Notes & Assumptions

The illustrations take into account the current charging structure of the Aviva Pension Portfolio (Choice) and your existing arrangements.

The fund available at retirement will depend upon the actual growth, in your selected plan and the funds. The figures are not guaranteed.

All firms use the same rates to illustrate how funds may be converted into a pension but their charges vary. The maximum that growth rates can be illustrated at is set by the Financial Conduct Authority (FCA), some providers however choose to show lower rates. This comparison is on a like for like basis.

The actual transfer value received may be higher or lower than that shown due to investment fluctuations between the calculation date of this analysis & completion of the transfer.

You should be aware the investment choice available with Aviva may differ from your current providers. This could impact on the future performance of your fund.

For inflation adjusted illustrations, inflation is assumed to be 2% p.a.

The illustration is based on standard plan charges, the level and style of commission varies according to the provider.
