---

This is an illustration of what you might get back from your plan. The amounts shown are not guaranteed.

---

## Who does the plan cover?

|                       |             |
|-----------------------|-------------|
| Member                | [REDACTED]  |
| Age                   | 69          |
| Selected pension age  | 75          |
| Selected pension date | 7 June 2031 |

---

## What is the plan value?

The value of your funds as at 24 September 2025 is £211.32.

---

## What might you get back?

The following table shows the value of what you might get back at age 75 based on fund specific growth rates. Because over time inflation will reduce what money can buy, we've illustrated the value of your plan after taking account of inflation of 2.0% each year. In other words the amounts shown are equivalent to what they would be worth today.

### Your total retirement benefits after inflation

| If your pension funds grow at                                                                                                                                                                                                                                                                                                                                               | -0.3% after<br>inflation | 2.7% after<br>inflation | 5.7% after<br>inflation |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------|-------------------------|-------------------------|
| your total fund value could be equivalent to                                                                                                                                                                                                                                                                                                                                | £204                     | £242                    | £285                    |
|                                                                                                                                                                                                                                                                                                                                                                             | today                    | today                   | today                   |
| which could give you a pension equivalent<br>to a yearly income today of                                                                                                                                                                                                                                                                                                    | £16                      | £22                     | £30                     |
| or, a tax-free cash lump sum equivalent to                                                                                                                                                                                                                                                                                                                                  | £51                      | £60                     | £71                     |
| You can normally take up to 25% as a tax-free cash lump sum, the tax-free cash lump sums stated above assume a rate of 25%. This does not take into account any protection you may have or your available Lump Sum Allowance (LSA) and Lump Sum and Death Benefit Allowance (LSDBA). For more information, please refer to 'A guide to pension tax' on your Scheme website. |                          |                         |                         |
| plus a smaller pension equivalent to a yearly income today of                                                                                                                                                                                                                                                                                                               | £12                      | £16                     | £22                     |

We've assumed that:

- your pension will be paid monthly in advance for your lifetime
- the pension will continue to be paid for 5 years from when you start taking it if you die within this period.

**Please note:**

- these figures are only examples and aren't guaranteed - they're not minimum or maximum amounts. Your retirement fund depends on how your investment grows and the tax treatment of the investment
- your retirement fund could be more or less than this
- your pension income will depend on how your investment grows and annuity rates at the time that you retire.
- To help keep track of your plan, we'll send you a statement each year.

## What are the charges?

The investment charges information document contains information about current charges that apply. Please note that any of the charges may change in the future.

---

### How the charges reduce the growth of your pension fund

All pension providers give this information to help you compare their charges.

Below we show the effect of our charges on the assumed growth rate shown. The growth rate could turn out to be less than this and you may get back less than you paid in.

### How charges reduce the value of your pension fund

Because over time inflation will reduce what money can buy, we've illustrated the payments and value of your plan after taking account of inflation of 2.0% each year. In other words the amounts at the end of each year are equivalent to what they would be worth today.

The fourth column shows how our charges can reduce the value of your fund and also illustrates what you could transfer to another pension plan.

The projected values below include the current value of your fund which, at the date of illustration, was £211.32.

#### If your funds grow by 2.7% after inflation

| At the end of year | Total payments<br>in today's value | Before any<br>charges are taken | After all charges<br>are taken |
|--------------------|------------------------------------|---------------------------------|--------------------------------|
|                    | £                                  | £                               | £                              |
| 1                  | £0                                 | £217                            | £216                           |
| 3                  | £0                                 | £229                            | £227                           |
| 5                  | £0                                 | £242                            | £238                           |
| At age 75          | £0                                 | £246                            | £242                           |

### How charges can reduce the growth rate of your fund

The reduction in the plan value from £246 before charges to:

- £242 means that after taking account of all charges, it reduces the growth rate down from 2.7% after inflation to 2.4% after inflation. This is a reduction in growth of 0.3% a year.
- The information on the reduction in investment growth can be used to compare the effect of charges with similar products.
