Your Pension Choice Illustration

Introduction

The Financial Conduct Authority is a financial services regulator. It requires, Aviva to give you this important information to help you to decide whether our Pension is right for you. You should read this document carefully so that you understand what you are buying, and then keep it safe for future reference.

This is an illustration of what your pension might be worth when you retire. The projected amounts shown within this Illustration are indicative and are not guaranteed.

Please read this document along with **'The Pension Key Features Document'** and any other information you receive about your Pension, so that you understand important information about benefits, price inflation, risks, tax and your rights and commitments.

Your tax liability depends on your personal circumstances and may change in the future.

If you have any questions, please speak with your financial adviser in the first instance. Or you can contact us on 0800 068 2170 between Monday to Friday, 8.30am to 5.30pm or email us at advisedplatform@aviva.com.

This illustration shows:

- The current value of your Pension.
- New and existing payments and transfers into your Pension.
- Investment selection for your Pension.
- Fees and charges which are applicable to your Pension.
- What your Pension might be worth.

Investment account and ISA provided by Aviva Wrap UK Limited. Registered in England No. 4470008. Aviva, Wellington Row, York, YO90 1WR. Authorised and regulated by the Financial Conduct Authority. Firm Reference Number 231530.

Pension provided by Aviva Pension Trustees UK Limited. Registered in England No. 2407799. Aviva, Wellington Row, York, YO90 1WR. Authorised and regulated by the Financial Conduct Authority. Firm Reference Number 465132.

Aviva Wrap UK Limited. Registered in England No. 4470008. Aviva, Wellington Row, York, YO90 1WR. Authorised and regulated by the Financial Conduct Authority. Firm Reference Number 231530.

Bond provided by Aviva Life & Pensions UK Limited. Registered in England No. 3253947. Aviva, Wellington Row, York, YO90 1WR. Authorised by the Prudential Regulation Authority and regulated by the Financial Conduct Authority and the Prudential Regulation Authority. Firm Reference Number 185896.

Staying informed

It is important to keep track of your pension fund. To help you do this we will send you a statement every three months which will advise you of your pension fund value and what your benefits might be worth. You can also view the value of your investment at any time via MyAviva.

If you are unsure about anything in this illustration, please speak to your financial adviser.

Your details

Your details		How to contact your adviser
Name:	██████████	██████████
Date of birth:	07 June 1956	
Intended retirement date*:	07 June 2031	
Intended annuity purchase age**:	79	████████████████████

* You can change your intended retirement date

**You do not have to buy an annuity at that time. You could instead choose to do so earlier, later or to stay in drawdown.

Payments into your Pension

Transfers

Source of transfer	Value*
Uncrystallised transfers	
Uncrystallised Transfer	£3,744.00
Uncrystallised Transfer	£103,439.00
Uncrystallised Transfer	£3,002.00
Total	£110,185.00

*Exact amount will be known when transfer is complete

Where will your payments be invested?

The total amount invested in each asset is shown below.

Investment	Uncrystallised transfers in
Assets	
HSBC Global Strategy Balanced Portfolio C Acc	50.00%
CT Universal MAP Balanced C Acc	50.00%
Total investment	100.00%

The charges for your Aviva Pension

The charges are described below. They comprise:

- Our charges for administering your Pension.
The way these charges are paid is explained in your Key Features document
- Investment related charges.
- Adviser charges.

Product charges

The Aviva charge

We will deduct a charge from your pension fund for the cost of administering your portfolio. The amount will depend on how much is in your pension portfolio each month. The Aviva Charge is calculated based on the total value of your investments through this platform service, including the balance in the cash account when the charge is taken.

For any investment above £0.00 - Above	0.21%
--	-------

Unless otherwise indicated, all charges are taken from the cash account. If there are insufficient monies in the cash account to pay charges then we will automatically dis-invest the required number of units to pay charges. We will not do this if you have certain investments; please see the Key Features for more information.

Investment related charges

The charge depends upon the investment you choose and they may vary in the future. Based on your current choice, the charges are:

Investment	OCF/TER charge %
CT Universal MAP Balanced C Acc GB00BF99W060	0.29%
HSBC Global Strategy Balanced Portfolio C Acc GB00B76WP695	0.18%
Weighted Average charge	0.23%

Putting these rates into context, for every £1,000 a charge of 0.5% equates to £5.

Initial Fund Charge - means a charge imposed by the fund manager on any purchase of shares by an investor. It is calculated as a percentage of the gross amount invested, and deducted prior to investment. Some funds may have different prices for buying and selling units. In these cases the initial charge is included within the price at which you buy units. If the fund(s) above are being re-registered to Aviva from another provider, the initial fund charge will not be taken as it will have been paid previously.

OCF/TER % charge

In addition to the initial fund charge, fund managers will also take charges that depend on the investments chosen. These charges may be shown as the ongoing charge figure (OCF), total expense ratio (TER), or for insured funds, simply the annual fund charge. These cover the charge made by the fund manager for managing the investment as well as expenses incurred by the fund. Please note these charges are variable and may change over time.

Weighted average % charge

This is the average charge once the percentages of the investment choices are taken into account.

For further information about investment charges please talk to your financial adviser.

Interest on your Pension Portfolio cash account

Cash within your Pension will be held in one or more interest bearing client money trust account(s) with external account providers of our choice. This cash will be held in accordance with the FCA client money rules, as amended from time to time.

The interest rate payable is 3.30% annual equivalent rate (AER) and is variable. AER illustrates what the interest rate would be if it was compounded once each year. Interest rates can be positive, zero or negative. Interest will be credited to or deducted from (if the rate is negative) your cash account monthly on or around the 1st of each month.

To check the current interest rate on the cash account at any time, go to **aviva.co.uk/bank-interest-rates/**

Adviser charges

You have agreed to pay adviser charges through your Pension.

Initial Adviser Charge	3.00% which equals £3,305.55 from the cash transfer payments into your pension.
Ongoing Adviser Charge	1.00% of the value of your Aviva pension fund each year. Based on your new payments and today's value of your Aviva pension fund, this is estimated as £89.07 taken each month. The amount you pay will vary over time as the value of your Aviva pension fund changes.

What your pension fund might be worth

Your product builds up a pension fund based on your payments and the returns from the investment in your chosen assets. You can make choices about getting an income from your pension fund from the minimum pension age. This is currently age 55. From 6 April 2028 this will be age 57 unless you have a protected pension age. To find out more visit <http://www.aviva.co.uk/nmpa>. For example, you can exchange your pension fund for the promise of a regular income from an insurer, known as an annuity (which will be guaranteed for the rest of your life). Alternatively you can gradually take money directly from your pension fund.

This section shows benefits you might receive assuming three different yearly growth rates (low, middle and high). The actual rates of return could be higher or lower than these.

The figures below illustrate what you might get back in "today's money" which means they take the effect of price inflation into account. Seeing the figures in this way shows you what they could be worth today, and how much you may have available to fund your retirement. It's important to note that price inflation reduces the worth of all savings and investments. The effect of this is shown in the table below and could mean the fund may reduce as well as grow in "today's money". Before reviewing these figures, please read 'Important notes about the projections'.

For the purposes of this illustration we've assumed a price inflation rate of 2.00%. Underneath we show the other assumptions we've used.

This is only to give you an idea because we can't predict future investment growth or price inflation.

Important notes about the projections

- The growth rates are not guaranteed. They are not minimum or maximum amounts. What you get back will depend on what you make on your actual investments. The value of your pension fund can go up or down and may be worth less than has been paid in.
- Product and Adviser charges have been assumed to remain the same as they are today.
- However, charges may vary in the future.
- Price inflation is the general increase in the price of goods and services over time, it's important to note that price inflation reduces the worth of all savings and investments. These projections illustrate what you might get back in "today's money" which means it takes the effect of price inflation at 2.00% into account.
- The amount of annuity you may eventually buy may be adversely affected if the investment returns are low when you purchase your annuity. Annuity rates may be more or less favourable if you choose to buy an annuity in the future.
- If part of your investment is used to buy an annuity or the investment is reduced because of a pension sharing order (in the event of divorce or dissolution of a civil partnership) the income you are currently taking will reduce your fund value quicker than it would have done previously.

What your accumulation pension fund might be worth and the income it could provide

What the benefits from your uncrystallised fund might be worth on 07 June 2031 after the changes shown in the Payments section have taken place:

	Example yearly investment growth rate		
	Lower 1.9%	Medium 5%	Higher 8%
Example growth rates reduced by price inflation at 2%	-0.1%*	2.9%	5.9%
Your pension fund could be worth	£97,500	£115,000	£135,000
You can normally take up to 25% as a tax free lump sum. This could be:	£24,300	£28,700	£33,700
With the rest you could buy an annuity of:	£6,070	£8,300	£11,100
Or, if you don't take a lump sum your annuity could be:	£8,100	£11,000	£14,800

* A negative growth rate after price inflation will reduce the buying power of your Pension over time.

It is important to understand that all the above figures are to give you an idea of what you could receive. We can't predict how your fund will grow and what it will cost to buy an annuity when you retire.

Our other assumptions

- You keep the same investments.
- The charges stay the same.
- When you buy an annuity you decide to get:
- The annuity purchase figures assume that your pension will be paid for a guaranteed 5 year period.
- The income is paid in advance. All income figures are shown before deduction of tax.

How the charges reduce the value of your pension fund

All pension providers have to provide these figures to help you compare their charges.

For the purposes of the last three columns, we have assumed investments will grow at 2.9% each year. This is based on an example growth rate of 5.0% to which we have then applied price inflation at 2%. We have also applied inflation to your total payments. These rates are not guaranteed and growth could be more or less than this.

At end of year	Total new payments	Before charges	After taking product and investment charges	After taking all charges
1	£110,000.00	£113,000.00	£112,000.00	£108,000.00
3	£110,000.00	£120,000.00	£118,000.00	£111,000.00
5	£110,000.00	£127,000.00	£124,000.00	£114,000.00
At age 75	£110,000.00	£129,000.00	£126,000.00	£115,000.00

The last line of the table shows that over the full term of the pension:

There may be charges based on your asset selection which are not taken into account in the final column of this table. Please refer to your key features document if you require details of any additional charges.

- Product and Investment charges could reduce this pension fund from £129,000.00 to £126,000.00 - this is the same as reducing the investment growth after inflation from 2.9% to 2.5%. This is a reduction in the growth rate of 0.4%.
- All charges could reduce this pension fund from £129,000.00 to £115,000.00 - this is the same as reducing the investment growth after inflation from 2.9% to 0.8%. This is a reduction in the growth rate of 2.1%.

The figures show the effect of charges so you can compare with similar products.

The effect of charges can vary, dependent on payment type and investments chosen. We have combined the separate figures in a proportionate way to show the overall effect of total deductions.

If you are unsure about anything in this illustration please speak to your financial adviser.
